- Footer
 1. Insert information such as text and ads

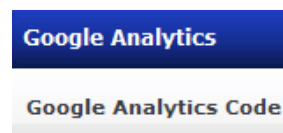

Site Map

- Generate site map

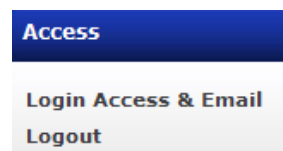

Google Analytics

- Add Google Analytics Code to all pages

Access

- Set login username, password and contact email for Contact page

Other tips for using the Editor

1. Other affiliates or content can be added in the following locations:

a. Advertising sidebars

Insert code from any merchant in these sidebars from the admin panel.

b. Editor on every page in the admin panel

Add merchant affiliate text and links or click “Source” in the top left-hand corner of the editor. In “Source,” insert affiliate or other code in the editor.

2. To upload an image to a site and place it on any page with the editor, do the following:

In the editor, select the location of a picture in the content field, then click Insert/Edit Image, next click “Browser Server” and finally select the option at the bottom of the pop-up page to upload the image. After selecting and uploading the image, a list of uploads will appear on the server. Select the desired image and click OK.

3. When a description is short, the dividing line will not appear below the picture on the products page. To adjust, insert line breaks “
” in the description until the line is below the product picture.

4. To avoid double spacing when pressing return in the text editor, hold down the shift button while pressing return. This will result in single spacing.

All content such as links, text and colors are easy to edit; however, some items can only be edited outside the Admin Panel. This can be accomplished with simple editing and FTP uploads. See the Outside Admin Changes PDF file for more details.
